

DISCOVER WHERE PHYSIOLOGY CAN TAKE YOU

Physiology is the science of life. Physiologists work in an exciting branch of biology to understand how living things work. You can study physiology by itself or as part of another bioscience degree at University.

**Kiu Sum**

Education and Careers Coordinator,
Institute of Food and Science
Technology

“ I love sharing my passion for physiology. Through physiology you can help tackle some of the big challenges facing the world. It's exciting to work with scientists who are tackling health problems like obesity. ”

**Julia Attias**

Research Student,
King's College London

“ My research team is looking at how to safely get humans to Mars for the first time. Our research into a skinsuit to recreate the effects of gravity will help protect astronauts' bodies in space. ”

**Andrew Davies**

Sport and Exercise Science
student, Liverpool John Moores
University

“ I'm fascinated by the impact that exercise has on our bodies. My favourite thing about physiology is the opportunity to look at minute things in the body that can have extraordinary impacts on health and performance. ”

These are just some of the exciting physiology career options open to you!
