The Grey Record

September AGM 2018 – July AGM 2019

About The Physiological Society:

As the largest network of physiologists in Europe, with academic journals of global reach, we continue our 140-year tradition of being at the forefront of the life sciences.

Offices of The Physiological Society:

Correspondence and enquiries should be directed to the offices of The Society:

The Physiological Society
Hodgkin Huxley House
30 Farringdon Lane
London
EC1R 3AW

Strategy 2018-22:

Vision

Physiology flourishing

Purpose

To advance physiology in order to foster the understanding and improvement of life.

Overall Objective

In the next 3-5 years increase recognition that physiology is essential to solving the health challenges faced throughout life.

Council of Trustees:

Trustees are legally responsible for the overall governance, management and policy of The Society, ensuring the charitable objectives for which it has been set up are met. The Trustees are also the Directors of The Society. Trustees are elected to serve a period of four years and any voting Member is eligible to stand. Meetings of the Council are chaired by the President.

Honorary Members 2018:

We award Honorary Membership to persons of distinction in science who have contributed to the advancement of physiology.

Graham Burton

Graham Burton was awarded Honorary Membership primarily in recognition for his work on placental physiology in which he has a long-standing interest. Having qualified in medicine from the Universities of Cambridge and Oxford, and having pursued research at Cambridge, he now holds the Mary Marshall and Arthur Walton Professorship of the Physiology of Reproduction at Cambridge. One of his most important findings is that the human embryo in the uterus is supported by nutrition from the endometrial glands during the period of organogenesis, prior to onset of the maternal arterial circulation to the placenta at the end of the first trimester. He has published his research findings in *The Journal of Physiology*, organised symposia at Society meetings, mentored numerous young researchers and had a keen involvement in outreach activities designed to increase public awareness of the importance of research in reproductive physiology. He is the inaugural Director of the Centre for Trophoblast Research at the University of Cambridge and was elected a Fellow of the Academy of Medical Sciences in 2011.

Michael W. Young

Michael W. Young was awarded Honorary Membership in recognition of the physiological importance of his work on the molecular mechanisms responsible for circadian rhythms, for which he was joint recipient of the 2017 Nobel Prize in Physiology or Medicine, along with Jeffrey C. Hall and Michael Rosbash. He is Richard and Jeanne Fisher Professor and Head of the Laboratory of Genetics at The Rockefeller University. He is also the University's Vice-President for Academic Affairs. Young received a BA in biology in 1971 and a PhD in genetics in 1975, both from The University of Texas, Austin. Young is a member of the National Academy of Sciences and a Fellow of the American Academy of Microbiology. In addition to the 2017 Nobel Prize in Physiology or Medicine, he (along with colleagues Jeffrey Hall and Michael Rosbash), received the 2009 Gruber Neuroscience Prize, 2011 Horwitz Prize, 2012 Canada Gairdner International Award, 2012 Massry Prize, 2013 Wiley Prize, and the 2013 Shaw Prize for discoveries of molecular mechanisms that control circadian (daily) rhythms.
